Scenario #1

The first salmon I caught this year had what appears to be tapioca disease. So far it's the only one we've seen this year, and we did not see it at all last year.

Scenario #2

Heavy rains have elevated river levels throughout August and September. High water continues to erode the river bank in the community. The photos show a tree that was 22 feet from the edge is now 3 feet. Total erosion has reached 91 ft. by old landfill and new mark shows 112 ft. marker.

Scenario #3

This season we have observed many salmonberry bushes that appear to be defoliated. It seems something is eating the leaves. We have also noticed the berries look sickly. They are red but hard and almost burnt looking. They appear this way on otherwise healthy looking bushes and defoliated bushes. We usually see some like this every year but they are abundant this year.

Scenario #4					
A Beluga Whale, a marine mammal usually found in coastal/oceanic waters, was seen in the Yukon River, 16 miles above Tanana, Alaska— some 600 miles from where the river empties into the Bering Sea. Post made in collaboration with Joyce Harper Roberts, who made the observations and provided the videos of the sighting.
